

MCQ

1. What will be the output of the following code snippet?

```
def func(a, b):  
    return b if a == 0 else func(b % a, a)  
print(func(30, 75))  
a) 10  
b) 20  
c) 15  
d) 0
```

Ans: c) 15

At beginning the a is !=0

Therefore,
print(func(75%30, 30))
= func(15,30)

Still a is !=0,

Therefore,
Print(func(30%15,15))
= func(0,15)

Now a==0

Therefore,
Return b
=15.

2. numbers = (4, 7, 19, 2, 89, 45, 72, 22)
sorted_numbers = sorted(numbers)
even = lambda a: a % 2 == 0
even_numbers = filter(even, sorted_numbers)
print(type(even_numbers))
a) Int
b) Filter
c) List
d) Tuple

Ans: b) filter

- 3) As what datatype are the *args stored, when passed into
a) Tuple
b) List
c) Dictionary
d) none

Ans: a) Tuple

- 4) set1 = {14, 3, 55}
set2 = {82, 49, 62}
set3={99,22,17}

```
print(len(set1 + set2 + set3))
```

- a) 105
- b) 270
- c) 0
- d) Error

Ans: d) Error

5) What keyword is used in Python to raise exceptions?

- a) raise
- b) try
- c) goto
- d) except

Ans: a) raise

6) Which of the following modules need to be imported to handle date time computations in Python?

- a) timedata
- b) date
- c) datetime
- d) time

Ans: c) datetime

7) What will be the output of the following code snippet?

```
print(4**3 + (7 + 5)**(1 + 1))
```

- a) 248
- b) 169
- c) 208
- d) 233

Ans: c) 208 (64+144)

8) Which of the following functions converts date to corresponding time in Python?

- a).strptime
- b) strftime
- c) both a) and b)
- d) None

Ans: b) strftime

9) The python tuple is _____ in nature.

- a) mutable
- b) immutable

- c)unchangeable
- d) none

Ans: b)immutable

- 10) The ___ is a built-in function that returns a range object that consists series of integer numbers, which we can iterate using a for loop.
- A. range()
 - B. set()
 - C. dictionary{}
 - D. None of the mentioned above

Ans: A. range()

- 11) Amongst which of the following is a function which does not have any name?
- A. Del function
 - B. Show function
 - C. Lambda function
 - D. None of the mentioned above

Ans: C. Lambda function

- 12) The module Pickle is used to ____.
- A. Serializing Python object structure
 - B. De-serializing Python object structure
 - C. Both A and B
 - D. None of the mentioned above

Ans: C. Both A and B

- 13) Amongst which of the following is / are the method of convert Python objects for writing data in a binary file?
- A. set() method
 - B. dump() method
 - C. load() method
 - D. None of the mentioned above

Ans: B. dump() method

- 14) Amongst which of the following is / are the method used to unpickling data from a binary file?
- A. load()
 - B. set() method
 - C. dump() method
 - D. None of the mentioned above

Ans: A. load() (method used is pickle.load())

- 15) A text file contains only textual information consisting of ____.
- A. Alphabets
 - B. Numbers
 - C. Special symbols

D. All of the mentioned above

Ans: D. All of the mentioned above

16 Which Python code could replace the ellipsis (...) below to get the following output?

(Select all that apply.)

```
captains = {  
    "Enterprise": "Picard",  
    "Voyager": "Janeway",  
    "Defiant": "Sisko",  
}
```

Enterprise Picard,

Voyager Janeway

Defiant Sisko

a) for ship, captain in captains.items():

print(ship, captain)

b) for ship in captains:

print(ship, captains[ship])

c) for ship in captains:

```
print(ship, captains)
```

d) both a and b

Ans: d) both a and b

17) Which of the following lines of code will create an empty dictionary named captains?

a) captains = {dict}

b) type(captains)

c) captains.dict()

d) captains = {}

Ans: d) captains = {}

18) Now you have your empty dictionary named captains. It's time to add some data! Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway", and "Defiant": "Sisko".

Which of the following code snippets will successfully add these key-value pairs to the existing captains dictionary?

a) captains{"Enterprise" = "Picard"}

captains{"Voyager" = "Janeway"}

captains{"Defiant" = "Sisko"}

b) captains["Enterprise"] = "Picard"

captains["Voyager"] = "Janeway"

captains["Defiant"] = "Sisko"

c) captains = {

"Enterprise": "Picard",

"Voyager": "Janeway",

"Defiant": "Sisko",

}

d) None of the above

Ans: b) captains["Enterprise"] = "Picard"

captains["Voyager"] = "Janeway"

captains["Defiant"] = "Sisko"

19) You're really building out the Federation Starfleet now! Here's what you have:

```
captains = {
```

```
"Enterprise": "Picard",
```

```
"Voyager": "Janeway",
```

```
"Defiant": "Sisko",
```

```
"Discovery": "unknown",
```

```
} Now, say you want to display the ship and captain names contained in the dictionary, but you also want to provide some additional context. How could you do it?
```

a) for item in captains.items():

```
print(f"The [ship] is captained by [captain].")
```

b) for ship, captain in captains.items():

```
print(f"The {ship} is captained by {captain}.")
```

c) for captain, ship in captains.items():
print(f"The {ship} is captained by {captain}.")

d) All are correct

Ans: b) for ship, captain in captains.items():
print(f"The {ship} is captained by {captain}.")

- 20) You've created a dictionary, added data, checked for the existence of keys, and iterated over it with a for loop. Now you're ready to delete a key from this dictionary:

```
captains = {  
    "Enterprise": "Picard",  
    "Voyager": "Janeway",  
    "Defiant": "Sisko",  
    "Discovery": "unknown",  
}
```

What statement will remove the entry for the key "Discovery"?

- a) del captains
- b) captains.remove()
- c) del captains["Discovery"]
- d) captains["Discovery"].pop()

Ans: c) del captains["Discovery"]
